**SPECIAL NOTE:**

If you are installing Street Scene Mirrors with Signal option, the wiring for the heaters will have a push on terminal and a ring connector on. The wires for the signal system will have no connectors on them. **Do not mix up**

1. Install Street Scene Heated Mirrors following mirror installation instructions.
2. Mount the switch in a suitable location. A good place is on the lower dash panel. Drill a 1/2” diameter hole and insert the switch from the front side and install the nut from the backside and tighten.

**NOTE: LOCATION OF WIRES ON SWITCH**

Top Of Switch: (Marked "Earth") Black wire from four foot power connecting harness.
Center Of Switch: (Marked "Load") Red wires from right & left mirror heaters.
Bottom Of Switch: (Marked "Supply") Red wire from four foot power connecting harness.

Locate a switched 12 volt power supply at the fuse panel (Power goes off when ignition switch is in the "off" position). Using the blue quick splice connector supplied, crimp the Red wire from the switch harness to the wire found at the fuse block. **DO NOT** connect to a constant 12 volt power supply.

3. Remove the right and left kick panels.
4. Run the Red / Black wire on the mirror into the door. Pull out the rubber boot from the door and door frame. Guide the wire harness through the door and out the hole vacated by the boot. Remove any slack.
5. Pass the wire harness through the rubber boot between the door and the door frame.
6. Guide the wire harness through the door frame and into the vehicle.
7. Do the same on the passenger side. Run the wire across the dash to the left side of the steering column.
8. Connect the RED wire from the right and left wire harness to the center pin on the switch using the "One to Two" connector.
9. Attach the BLACK wires with the ring connectors to a suitable nearby ground location on the metal framework on the vehicle.
